About Elyxor

In today's fast-moving, ultra-competitive business environment, the ability to harness the power of software goes a long way towards determining every company's success. But despite the potential software and technology have to improve efficiency, drive innovation and reduce risk, many companies lack the expertise or simply the time to continually tap its transformative power.

That is where Elyxor comes in. Founded in 2010, Elyxor is comprised of a team of software engineering specialists who have spent the past two-plus decades building successful software firms and advising companies in industries ranging from financial services to healthcare to retail. Among the accomplishments of Elyxor's executive and senior technology team are launching and growing the software company Celarix, a pioneer in providing real-time visibility into complicated international supply chains. Elyxor employees were also behind the success of online retailer, ruelala.com.

With offices in Boston, Massachusetts and North Little Rock, Arkansas, Elyxor's team has an average of 15-plus years of experience in DevOps and test automation, the software development life cycle (SDLC), strategy, the Internet of Things and application development.

The Elyxor Difference

Elyxor delivers that extensive technical expertise and experience to help clients in all industries design, implement and sustain software and technology solutions that deliver meaningful business results. Though Elyxor works collaboratively with clients to complete design work and develop strategy, what sets us apart is our focus on execution and results. We work quickly to understand our client's capabilities and identify technical and skills gaps. We then move fast to build and deliver solutions that provide immediate value while also creating the processes, culture and skills that ensure long-term success.

To deliver on that promise, we provide clients:

- Expertise in DevOps and test automation, SDLC, the Internet of Things and application development. Our strategy and software experts have experience across a wide range of technical stacks, including emerging technologies, and a passion for leveraging their power to achieve business results.
- Guidance and instruction necessary for long-term success. Elxyor's experienced practitioners have the ability to both teach and do. With an emphasis on transferring knowledge, skills and processes, our aim is to help lead a self-perpetuating transformation and then get out of the way.
- An expansive toolbox of accelerators to speed the pathway to results. From the use of hybrid Elyxor/client teams to continuous demonstrations and feedback, our team draws from the wealth of best practices we have seen deliver results in the past.
